# WeRatesDogs Insights for Dogs' Lovers

WeRatesDogs is a Twitter account that rates people's dogs with a humorous comment about the dog. These ratings almost always have a denominator of 10.
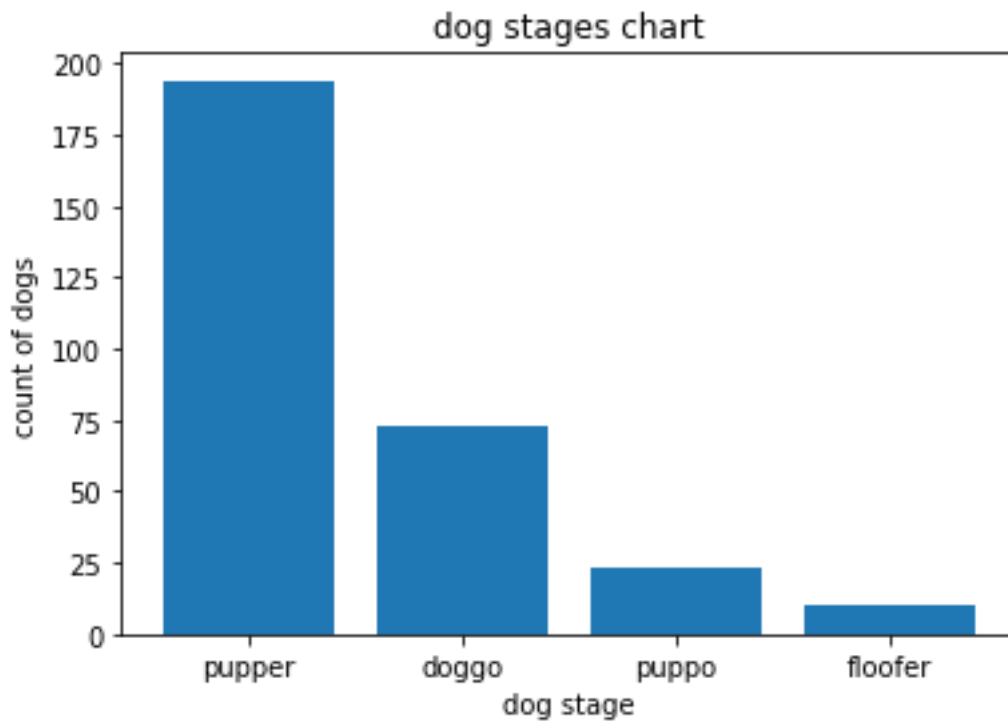

Almost always grater than 10. Why? Because 'they're good dogs Brent' if you are a dog's lover , the insights gleaned from this twitter account data introduces some interesting facts about dogs and dogs' lovers behavior towards their post that mostly features dogs photos in it.

1- Do higher favorite_count receive higher rating_numerator?-

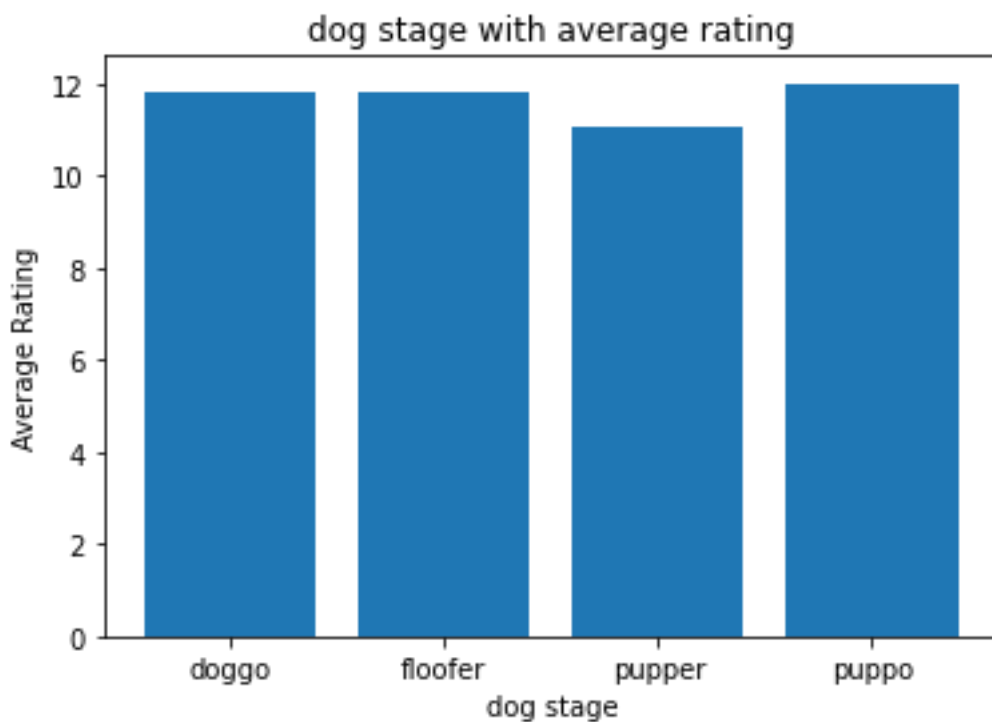

It's seems a relation between rating numerator and favorite count for the dogs lovers they give every dog a rate higher than the rating denominator and we want to see the relation between rating numerator which given by the users and the favorite count which liked the dog's photo to see if there a relation between them or not good photos (which get less likes) these dogs take high rating, as obvious from the chart the high rating numerator takes a high favorite count so we can say the rates ratio to favorite count is reasonable

2- Dog stage vs count of dogs

This chart give us the number of dogs stages and the count of dogs for every stage to get a view about the stages that we have in our data and as we see pupper dogs more than the other three stages sum (doggo, puppo and floofer)

3- Dog stage vs average rating

Now we can see if the dogs lovers love dog stage more than others we found from the chart that the difference between average rating between dog stages is small despite of the high difference between the number of every dog stage in our data.

We can extract that the people who love dogs almost love all stages and all breeds and the didn't give dogs a low rate because every dog is beautiful also this account to make dog's lovers have fun (and dogs also ☺) .
